

## **Smart City experts DIGIMONDO and ICE Gateway cooperate for IoT projects**

### **IoT Software Company and Smart City Strategists Start Cooperation**

**Hamburg/Berlin. The IoT software company DIGIMONDO and the digitization service provider ICE Gateway have already proven in numerous projects how a city becomes a Smart City. In the newly concluded cooperation of the companies, they are now bundling their knowledge and experience for digitisation projects of municipalities and cities.**

Both companies are experts in the field of digitization. ICE Gateway provides hardware, IoT infrastructure, digitization strategies and IT services, whereas DIGIMONDO focuses on IoT software solutions and IoT consulting. Thus, DIGIMONDO and ICE Gateway complement each other to support their customers in the digital transformation.

"Our IoT networks are based on programmable mobile edge computers (iceMEC), which are now also available as a LoRaWAN® model. Data collected from sensors are safely processed on the device. Afterwards, we can send the data to the DIGIMONDO IoT software for analysis and visualization," explains ICE Gateway Managing Director Ralf Gerbershagen. "ICE Gateway's technology is used for numerous services ranging from intelligent street lighting to traffic analysis and waste management. With ICE Gateway, we are pleased to have gained a new partner who has experience with these services," adds DIGIMONDO-COO Otto Smits.

DIGIMONDO and ICE Gateway are pursuing a common goal: to make the Internet of Things as secure and simple as possible for users. "Our solutions bridge the gap between the real and the digital world. It is our joint mission, especially in Smart City projects, to make the transition for all possible and to make it easier," Gerbershagen and Smits said about the goal of their cooperation.

### **Digimondo GmbH as IoT service and software provider**

DIGIMONDO is an IoT software company headquartered in Hamburg, Germany. The company was founded in 2016 as a start-up in the E.ON Group. The company's goal is to create a better digital world for tomorrow through IoT and digitization. With the DIGIMONDO software firefly, a LoRaWAN network server, and the software niota, a technology-independent IoT platform, customers can create their own IoT solutions. ### **About ICE Gateway**

ICE Gateway offers innovative smart city solutions and is a digitization strategy partner. With the help of a secure infrastructure solution based on a programmable Mobile Edge Computer (iceMEC), ICE Gateway builds an IoT network. This digital network is the cornerstone for numerous services in the fields of street lighting, public transport, security, sensor technology and marketing. Smart-City solutions are secure, easy to install and scalable. The complexity for the customer is reduced to a minimum as ICE Gateway provides all IT services. All applications are data protection compliant.
